

I CLAIM:

1. A attachment method for pressed flowers comprising steps of:
 - a. covering pressed flowers with a layer of transparent resin which becomes sticky when heated;
 - 5 b. attaching said pressed flowers to a surface of a base material;
 - c. indirectly heating said pressed flowers to make said resin become sticky thereby firmly adhering said pressed flowers to said base material.
- 10 2. The attachment method for pressed flowers as claimed in claim 1, wherein said indirectly heating refers using a non-adhesive plate to cover said transparent resin and then using fingers to rub said non-adhesive plate to produce heat to enable said transparent resin to become sticky.
- 15 3. The attachment method for pressed flowers as claimed in claim 1, wherein said indirectly heating refers using a non-adhesive plate to cover said transparent resin and then using a heated iron to press said non-adhesive plate so as to make said transparent resin to become sticky.
